Rise Up

Elevate your network
with managed LEO
satellite connectivity

Because business never stops, neither should your connectivity

As your business accesses new markets and opportunities, implements transformative technologies, drives new revenue channels, and increases efficiency, your network faces increased pressure points and demands. You need to know you have a connectivity strategy that can keep every single site, device, and user online and productive, no matter what happens.

Everything from natural disasters, hardware failures, cyber attacks, and human error can have a significant impact on your business. But a resilient and diverse network can make all the difference.

Building network resilience into your connectivity strategy by layering in technology diversity is essential to ensure your people, places, devices and data across every site and location remain connected with reliable, high-speed Internet.

Resilient by design: Expereo's Low Earth Orbit satellite solutions ensure your business stays online

Designing a connectivity strategy with resilience at its core is not simple. You need to take into account the individual needs of each of your sites and the infrastructure availability in every location.

By integrating Expereo's Low Earth Orbit (LEO) satellite solutions into your connectivity strategy, you can create a resilient, diverse, high-speed, always-on network tailored to the specific needs of each site. Ensuring your teams stay productive, your sites are connected, and your business is operational, no matter what.

This is Low Earth Orbit satellite connectivity from Expereo

LEO satellite connectivity solutions from Expereo can be delivered in over 100 countries for near-global coverage that is suitable for:

1 Network resilience:

With LEO satellite connectivity as a backup or primary connection, your business remains protected from network disruptions due to physical infrastructure failures, fiber cuts, or regional outages. You gain an independent, technology-diverse layer that delivers consistent performance without relying on existing terrestrial networks.

2 The ability to connect anywhere:

LEO satellite connectivity is ideal for remote locations where traditional fixed line or mobile coverage is not an option, or does not offer fast-enough connectivity. With our local experts on the ground, we ensure delivery and installation wherever you need it.

3 Flexible deployment and scalability:

Expereo can quickly deploy and scale LEO satellite connectivity according to your business's needs without the delays or dependencies of traditional infrastructure. Additionally, Expereo's network management expertise ensures seamless integration into your existing systems, allowing you to respond flexibly to changing demands and business priorities.

expereoOne

The visibility and control your network needs

Only Expereo gives you complete visibility of your entire network down to site level with the Intelligent Internet platform, expereoOne.

Through expereoOne you have complete visibility of your LEO service; from tracking delivery to understanding any service disruption. Automated incident response tickets help you keep your business connected in the case of an incident. Through analytics and accurate visualization, you can identify any gaps, then choose and deploy the solutions you need to connect and grow your business.

expereoOne also gives you an accurate inventory of your orders, deliveries, site details, incidents, tickets, and invoices. So you can keep track of your costs as well as your services to make decisions based on powerful insights about performance.

The only networking partner you need to thrive

Expereo partners with you to understand the needs of your business on a site-by-site basis so we can design, build, and manage a resilient network strategy made up of the most viable connectivity solutions that will achieve seamless, uninterrupted connectivity everywhere you need it.

Here's what sets us apart:

Experience

At Expereo, we've been a part of the Internet for over 20 years. We're an experienced global connectivity partner who can deliver a complete connectivity solution with **Global Internet**, **Low Earth Orbit**, **SD-WAN**, **SASE**, **Enhanced Internet** and **Fixed Wireless Access** solutions.

Consultation service

As part of our LEO satellite connectivity solutions, experts will review your network to understand your needs and advise you on the best network design for your business.

A truly managed service

We handle everything from network design, site surveys and setup recommendations to hardware provisioning, installation, and business priority data packages, network management and optimization. With one point of contact to ensure a seamless customer experience.

Global, local support

Should you need support, we provide dedicated 24/7 services from five global support centers located around the world, so you can be reassured you are in safe hands.

LEO satellite connectivity delivery process

Step 1:

Pre-order site questionnaire

You will receive a questionnaire along with your quote to determine if your site is suitable for LEO services. The questionnaire asks simple questions about your site and should be filled out by your Local Point of Contact (LPOC).

Step 2:

Order placed

Once your order is placed, Expereo's delivery process begins. A site survey is integrated into the service delivery process post-order placement. If unforeseen installation requirements arise, we provide a transparent and customized installation proposal to keep your project on track.

Step 3:

Site survey

Before placing a LEO order, we conduct a comprehensive desk-based availability check, tailored to the site, ensuring a seamless service deployment. This is complemented by a customer-completed site questionnaire to accurately define the demarcation point.

Step 4:

Delivery & installation

We will manage the service and equipment delivery, ensuring the installation aligns with the site survey findings. Equipment will be mounted on a wall or pole, tested, and activated for use. With our expert evaluations, you gain clarity, control, and confidence in your connectivity solutions.

Step 5:

Visibility through expereoOne

Once installed, your service will be fully visible on expereoOne, allowing you to manage all your connectivity through the platform.

Expereo is an Authorized Reseller of Starlink

Expereo, as an Authorized Reseller of Starlink, delivers a managed solution combining Starlink's cutting-edge satellite connectivity, with full visibility in expereoOne, and a dedicated public IP address – ensuring seamless, secure, and scalable global connectivity.

STARLINK AUTHORIZED
RESELLER

When you get LEO satellite connectivity from Expereo, we provide:

Starlink Flat HP Dish and Cradlepoint by Ericsson device.

1TB data bundle.

Download 40 – 220 Mbps,
upload 8 – 25 Mbps.

A single public IP address.

Monitored and managed
through expereoOne

Whatever your connectivity challenges, wherever your business goes, we can help

Talk to our expert team about your global IP connectivity challenges and they can design the right connectivity strategy for your business. Our portfolio includes Global Internet, Low Earth Orbit, SD-WAN, SASE, Enhanced Internet and Fixed Wireless Access.

We are here to help you eliminate complexity, gain visibility and provide the performance backbone to help you grow.
