

Regional overview

Expand into APAC with confidence.

Build fast, resilient networks that perform and scale.

Agile network connectivity, wherever business takes you.

APAC is one of the most dynamic regions in the world. For enterprises expanding here, the many fast-growing economies mean the opportunity is huge. But so are the challenges: local regulation, cultural nuance, complex vendor landscapes, and connectivity that can be disrupted by anything from typhoons to subsea cable cuts.

Expereo makes expansion simple. We combine global reach with local expertise, curating the right mix of providers and technologies to keep your business resilient, compliant, and ready for growth. Our managed services don't just connect your sites seamlessly, they unlock entire markets.

Enabling business agility with:

- ✔ **Seamless global reach:** 40+ APAC countries (190+ worldwide) with unified global procurement and true local expertise.
- ✔ **Engineered for resilience:** Diverse access technologies and redundant design built for real-world geography, not just low-cost routes.
- ✔ **Simplified operations:** One contract (MSA), one invoice, and transparent pricing that includes all local taxes.
- ✔ **Compliance and cultural fluency:** We manage regulatory complexity, local negotiations, and cross-border nuances on your behalf.
- ✔ **Always-on customer experience:** Industry-leading visibility with expereoOne, award-winning service, and 24x7 multilingual support.

Enabling your business to deliver on time. Every time.

From manufacturing hubs in Vietnam to financial services in Singapore, from logistics centers in Malaysia to technology campuses in India, Expereo manages thousands of sites across APAC for enterprises just like yours.

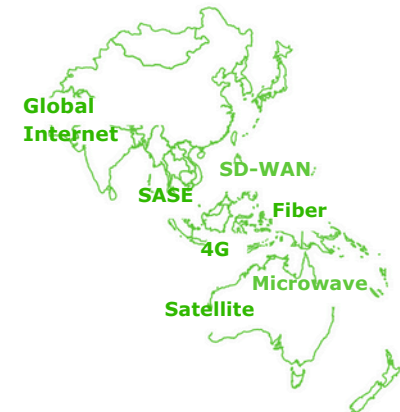

Managing multiple ISPs and contracts across 40+ countries is slow, risky, and expensive. Expereo removes that burden. We act as your single trusted partner for resilient, scalable, and compliant global internet connectivity.

Access you can trust across APAC:

Fiber, microwave, 4G/5G/LTE, and satellite last-mile options tailored to each location. Expereo's vendor-agnostic approach means we know which providers move fast, which are reliable, and how to design the right blend for resilience.

Whether it's supporting cloud-first enterprises in Indonesia or building resilient networks across 9,000 islands in the Philippines, Expereo keeps your people, places, and things connected. Reliably, securely, and without compromise.

Welcome to the Intelligent Internet

Always connected, always in control: expereoOne

When you're deploying into APAC, visibility and predictability are everything. expereoOne gives you a real-time, single-pane-of-glass view of your global and regional network estate down to each site, service, and invoice.

That means you can:

- **See clearly:** View real-time performance and historical trends to plan ahead with confidence.
- **Stay ahead:** Get proactive support and insights to keep your Internet services resilient and reliable.
- **Act instantly:** Allocate resources or order new services seamlessly through the expereoOne platform.

With expereoOne, you can control your network, scale it, and prove ROI across APAC and beyond from a single pane of glass.

Sustainability and Corporate Responsibility

Expereo works closely alongside suppliers that effectively manage the life cycles of their products, solutions and services in an environmentally responsible manner, and respect human and labor rights.
