# Getting you up and running quickly

Expereo's quick and efficient deployment framework for Fixed Wireless Access

DESIGN
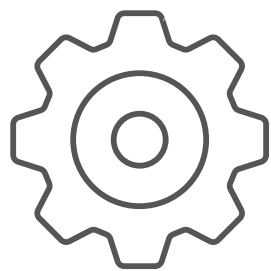

Assess business requirements:
Understand specific connectivity needs and bandwidth requirements of locations and sites.

Design wireless infrastructure:
Consider coverage, reliability, bandwidth options, and customer support needs. Identify potential obstacles to signal strength and performance.

Deliver connectivity strategy:
Determine optimal placement of FWA equipment to ensure maximum performance on a site-by-site basis.

DELIVERY & BUILD

Delivery and activation:
Equipment is delivered to the site. SIM is activated and on-site engineers install the FWA equipment at the best suited location(s).

Quality control:
On-site engineers test all networks, ensure proper configuration, and optimize signal strength.

RUN

Site is connected:
SIM and device automatically connect to the configured network and users can enjoy connectivity right away!

Visibility and optimization:
Once FWA is live, you can instantly monitor performance via expereoOne. While we make the necessary adjustments to optimize performance at every site.

Go faster to the future with Expereo

With Expereo's quick and efficient deployment process for Fixed Wireless Access solutions, enterprises can ensure business continuity, enhance connectivity, and support future growth initiatives in a fast and cost-effective way.

Reach your digital future faster, wherever you do business.

LET'S TALK TODAY

Delivery timeframes are subject to location requirements, maximum time for deployment shown here.

1-2 Business days

3-20 Business days
