Enhanced internet

Grow your business faster with reliable application performance everywhere

Enterprises across the world are working to accelerate adoption and delivery of new cloud-based applications.

With typical enterprise businesses investing upwards of 500 Euros per employee per month, the mission-critical task for CIOs is ensuring these new investments realize their full value and potential. That means ensuring your applications perform in a consistent and predictable way wherever your employees are located.

Enhanced Internet delivers on your investments

- **The Global Internet** is fragmented, with over 100,000 discrete networks. The more networks that are available, the more opportunities there are for performance problems that lead to business continuity threats and unpredictability.
- **Border Gateway Protocol (BGP)** is not application-aware and cannot account for performance when routing. This opens enterprises up to inefficiency as although traffic may be routed through the shortest path, it cannot intelligently consider whether this path is highly congested or has other inhibiting factors.
- **Enterprises** need consistent performance to maximize application ROI and user experience. But outsourcing network management to hyperscalers or using data centers doesn't offer the flexibility that the Global Internet can. CIOs need a solution that can enhance and fine-tune application performance in real time.

The answer:

By partnering with Expereo you can realize the true potential of your cloud and SaaS applications. We work alongside you to build a flexible Enhanced Internet solution wherever you need it, enabling you to overcome performance challenges and support business growth and better experiences.

This is Enhanced Internet

Expereo delivers the only AI-driven Enhanced Internet solution that enhances application performance across the whole Global Internet. Our proprietary software intelligently and proactively predicts performance and the best available network paths, routing your network traffic where performance is most reliable to reduce downtime and packet loss.

We resolve the challenges of traditional routing models with a performance-centric approach that drives reliability while keeping the flexibility and resilience of a Global Internet solution. Our proprietary software navigates around outages and congestion, ensuring that your users can always access the data and applications they need to work productively.

Using our own Enhanced IP Core infrastructure we can provide bi-directional, enhanced access to the best local, regional and global routes for all your cloud applications. Our AI is constantly monitoring all the networks that make up the Internet to ensure your business receives the best-performing path for your traffic, every time.

Plus, with **expereoOne**, you can see the status of your entire network infrastructure. Our intelligent Internet platform gives a single, complete and personalized view of all your networks' health, services, orders, incidents, invoices and more. One pane of glass provides real-time analytics and visualization so you can see how your Enhanced Internet is performing at a global and granular level. For example, you can simultaneously see statistics for overall quality of service, latency and packet loss and how frequently routes have been changed. With true visibility through expereoOne, you gain a deeper understanding of what's needed to safeguard performance for the future.

Our Enhanced IP Core provides the building blocks for better experiences

Expereo's Enhanced IP Core provides the flexible, reliable infrastructure to enable connectivity where you need it. Our IP nodes are mapped to major cloud provider data centers where density is highest, maximizing our reach to your locations and offering enhanced bi-directional traffic for all your applications.

Access the whole Global Internet with the best-available routes everywhere, for near-total resilience and reliability to optimize performance and boost your growth.

See the value across your entire business

Enhanced Internet from Expereo gives you the ability to boost performance across your applications and users. So you can see a host of benefits to your experiences and bottom-line, including:

Improved application reliability with traffic routed across the best performing routes. You get a smooth experience and consistent performance, with less packet loss and downtime leading to more productivity.

Better experiences for users who enjoy faster applications that help them work more efficiently, with fewer customer complaints and happier teams.

Lower transformation costs and higher efficiency with applications that perform consistently and deliver more return on your investment. IT resources are less stretched by having to resolve fewer performance problems, while more consistency ensures costs are more predictable and can be attributed accurately in advance.

A platform for stronger growth with near-to 100% destination availability to keep mission-critical IT operations resilient and performing. Plan for the future with more insight and certainty and take full advantage of cloud opportunities.

The only networking partner you need to thrive

With Expereo by your side, you can take advantage of our 20+ years of experience in the Internet. We already optimize Petabytes of data to thousands of destinations every month and are in prime position to advise you on the best connectivity options to support your business goals.

Here's what sets us apart:

Experience

We've built and delivered enterprise IP network solutions for over two decades. We know how to continually enhance your application performance to improve your agility and user experiences, in every location you need it.

Intelligence

Combining visibility with dynamic traffic routing across different networks and paths ensures you can respond to user needs fast and reduce the likelihood of performance problems and complaints.

Precision

We work with you as a strategic partner to design and manage your mix of network solutions, including Enhanced Internet. So you can focus on improving customer experiences and elevating your offerings.

Global, local support

Wherever you need to drive connectivity and enable your teams, we have the dedicated support available in-region to make it happen. We'll work with you from start to finish to design the right blend of networks according to your specific cloud choices and user requirements.
