SD-WAN service brochure

Embrace SD-WAN with confidence

An optimized network for optimized business

Reliable and predictable global application performance is the bedrock of any Cloud First/SaaS strategy. It's essential to your competitiveness and business growth.

But the internet is a complex and unpredictable environment, and any SD-WAN network is only as good as the network it runs over. If it's poorly designed and managed, it's putting your business at risk. Expereo's managed SD-WAN gives you secure, predictable application performance wherever your employees, clients, and suppliers are located.

Predictable, scalable performance

Expereo SD-WAN is our managed overlay service for global enterprise. We engage, design, build, and care for your global SD-WAN estate.

By combining this service with Expereo Internet we enable enterprises like yours to meet business objectives fast with a single supplier. Because when you combine your overlay and underlay network, you get the confidence of a resilient and scalable solution with exceptional network performance.

Maximize the benefits of cloud

If you're challenged by complex legacy infrastructure or resolving interactions between underlay and overlay, our unrivaled global expertise, experience, and support makes your transformation to an internet-based, cloud-centric SD-WAN seamless.

As you adopt more cloud services, you'll want improved connectivity and agility. By transitioning from MPLS to Secure SD-WAN you get cost-effective scalability and flexibility. So you can optimize your network infrastructure and maximize the benefits of cloud.

With Optimized Global Connectivity, multiple transports ensure high-performance connectivity across all your business locations. This means users, wherever they are, have the best experience accessing cloud services.

Complete control over your network

To meet your network's requirements for performance and connectivity, you need a holistic understanding to inform your decisions and optimize your network. Our unique network visibility platform, expereoOne, provides you with a comprehensive view of your Global SD-WAN network, across both underlay and overlay.

With insights into application usage, network health and traffic patterns, you have the tools to optimize your network, enhance performance, and ensure seamless user experiences across your Global SD-WAN.

Secure Global SD-WAN, as you need it

With Expereo Managed SD-WAN, you're empowered with the knowledge and expertise to design, deploy, and support a secure Global SD-WAN network.

SD-WAN technology, for your unique needs – Your business has distinct needs and preferences, such as extent of geographic coverage or network complexity. That's why we offer a range of SD-WAN technologies to accommodate the unique requirements and budget of your global enterprise.

Dedicated support, whenever you need it – When an issue or incident arises, you need a team who can promptly address and resolve them, with minimal business disruption. Our managed service includes incident management, providing you with dedicated SD-WAN experts who are ready and available to offer comprehensive support.

Change management – As your business evolves, so does your network. Our team of experts is fully prepared to deploy any necessary changes. Whether it's scaling up or reconfiguring your network infrastructure, we efficiently implement the required modifications, ensuring your network remains aligned with your evolving business needs.

A seamless SD-WAN journey, without the risk

With our profound understanding of the global internet landscape and local knowledge of last-mile connectivity, we're the ideal partner to assist you in deploying SD-WAN. Our expertise ensures your smooth transition to SD-WAN, leveraging our in-depth understanding of global networks and local intricacies. With Expereo, you get a trusted ally to guide you through the process and to optimize your network infrastructure for enhanced performance and agility.

We help you pick the right license for your needs

Licensing your SD-WAN solution shouldn't be a hassle. With our managed SD-WAN service, our Router & License gives you the convenience of device positioning and global logistics management with local compliance and technology license management from us.

We migrate you seamlessly

Our expertise and meticulous execution guarantee a hassle-free migration process, without disrupting your day-to-day. You're free to continue your operations uninterrupted, throughout the transition period.

We provide local support

Regardless of your site locations, we offer dedicated local hands to assist you with device setup. Our SD-WAN certified experts expertly configure the devices based on your specific global WAN requirements.

We actively monitor, 24/7

Experience the convenience of a single support point of contact that efficiently manages all your global network.
